

Research * Clinical Practice: Exploring the Borderlands of Living (Mette Terp Høybye)

[Mette Terp Høybye](#) ([Interacting Minds Centre](#) & Silkeborg Regional Hospital) takes us along to the boundaries of consciousness and shares with us insights from her interdisciplinary research group [Borderlands of Living](#) that has spent the last 3 years empirically studying the high-stake relationship and uncertainties between clinical practice and research practice in the prognostic assessment of unresponsive patients with serious brain injuries.

Examining these intersections of reasoning between clinic and research, we reflect together on how insights from this work can inform and affect our understanding of responsiveness, consciousness and personhood.

Topics and Resources mentioned in this episode:
